### My New Year Resolution

1<sup>st</sup> January, 2010

A new year, a new beginning. So I made a New Year resolution. I want to improve my Mathematics examination result because it was not good in the previous years.

Mathematics can be difficult, so I find it very hard to learn it. If I want to do better in Mathematics, I have to study harder. In addition, if I do not understand, I will ask the teacher and my friends for help. I will also pay more attention in class and do more Mathematics exercises every day to learn and practise.

I have so much confidence in achieving the goal. I think I can achieve my goal because I will be hardworking and will study more to make my dream come true. If my Mathematics has an improvement, my parents will feel delighted and they will admire me. If my Mathematics examination results are better, I can go to a good secondary school.

Therefore, I will try my best to make my wish come true.
